***Leveraging Edge to Cloud Solutions for Improved Mission Effectiveness in the DoD***

**Mansour “Manny” Yusuf**

Chief Cloud/Edge Architect

Dell Technologies Federal Systems

Abstract:

As the Department of Defense (DOD) continues to modernize its operations and increase its reliance on technology, the adoption of cloud solutions has become increasingly important. Cloud computing offers numerous benefits for the DOD, including increased flexibility, scalability, and cost-effectiveness. However, the unique security and compliance requirements of the DOD can present challenges in implementing and managing a multi-cloud strategy.

In this presentation, we will explore the various types of edge to cloud solutions available and the benefits they can provide for the DOD, including improved data management, collaboration, and mission effectiveness. We will also discuss key considerations for successfully implementing a multi-cloud strategy within the DOD, including the importance of identifying mission goals and needs, selecting the right cloud provider, and ensuring proper security measures are in place to meet the strict requirements of the DOD.

Attendees will leave with a better understanding of how edge to cloud solutions can help the DOD achieve its mission goals and how to effectively implement and manage a multi-cloud strategy within the unique constraints of the department.
