Enterprise Data Fabric: Transforming AI and Machine Learning at the Edge

Moderator:
RADM Julius S. Caesar, USN (Ret.)
DoD Digital Strategy and Development
NetApp

Panelists:
Frank Alcantar
Federal Client Executive
NetApp

Dan Holmay
AI and HPC Solutions Leader
NetApp

Mike Karlbom
Senior Account Executive
NVIDIA

Abstract:
To provide mandated enterprise protection and services, government agencies rely on one of their most strategic assets: Data. But consolidating and analyzing data from various sources in multiple forms is cumbersome and time-consuming, making real-time analysis nearly impossible. Regardless of the task, government agencies need an IT infrastructure that provides high performance and easy scalability to move faster, smarter, and more efficiently.

Join industry experts from NetApp and NVIDIA as they discuss how to adopt machine learning and artificial intelligence algorithms at the edge.
