BMC Helix Edge

Michael Alonso

Senior Solutions Engineer

BMC Software

Abstract:

BMC Helix Edge discovers, collects, aggregates, and analyzes operational technology (OT) data at the point of inception to enable anomaly detection, predictive maintenance, and digital twin simulation in a unified, enterprise-wide view. BMC Helix Edge is deployed at the edge of the network and interacts with physical devices, sensors, actuators, and other Industrial Internet of Things (IIoT) objects to enable:

- Anomaly detection
- Predictive maintenance
- Edge asset inventory
- Edge asset lifecycle management
