Innovation Showcase: Introducing Speed in Acquisition: Real-Time Collaboration to Manage Complex Defense Projects

Brain Fiore-Silfvast

Head of Marketing

Integrate

Abstract:

Modern defense programs are at risk of missing cost and schedule targets when mission partners can't work together in unison. Planning and communication efforts often fragment when stakeholders from multiple organizations use disparate tools to manage their programs, which introduces information latency, mission risk, and overruns. I'll introduce Integrate – modern project management software built for real-time, multi-organizational collaboration across defense and intelligence organizations. We enable interagency, industry, and international teams to rapidly execute from a shared, ultra-secure live schedule.

We'll demonstrate how Integrate solves these challenges by providing a single trusted schedule across organizational boundaries, with one-of-a-kind collaboration tools and transparency for those with a need to know. Integrate increases decision velocity, eliminates unnecessary silos without risk of overexposure, and replaces periodic status reporting with continuous program intelligence. Operational today on NIPR, SIPR, and JWICS, Integrate is already trusted by organizations including the U.S. Space Force.
